Welcome to NSR Reader!

Thank you for choosing NSR Reader (or at least trying it). I hope you'll like it because I've spent a lot of time trying to create easy to use and comfortable reader. This quick start guide will help you to use NSR Reader as much efficiently as possible. So, let's go!
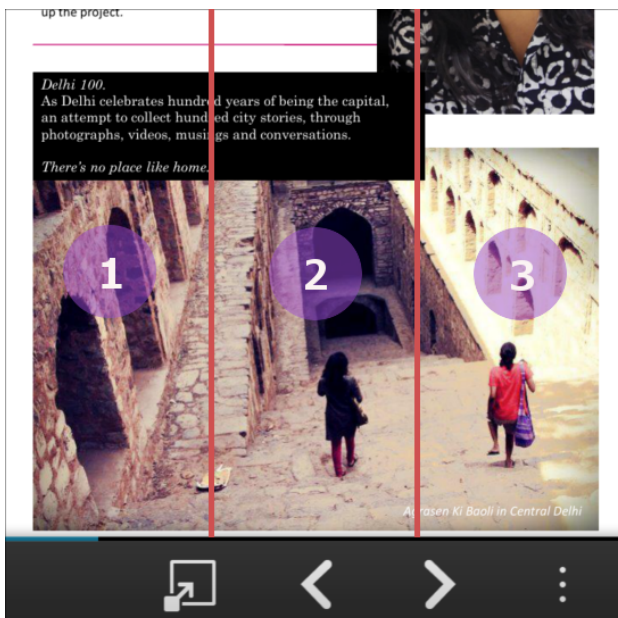

Supported Formats

NSR Reader supports following document formats:

- **Portable Document Format (PDF)** – one of the most popular platform independent format for documents, articles and even books, has .pdf file extension.

- **DjVu** – used primarily for scanned documents with text, line drawings and images, has .djvu and .djv file extensions.

- **Tagged Image File Format (TIFF)** – file format for storing scanned grayscale (including fax) or high depth color images, has .tiff and .tif file extensions. NSR Reader also supports multipage TIFF files.

- **Plain text files** – used to store any text data from one-line notes to huge books, has .txt file extension.

Navigation

NSR Reader gives different ways of navigation between pages. First of all you can use navigation arrows on Action Bar (at the bottom of the screen).

You can split vertically your screen into three zones. Each zone responds on double tap gesture with different behaviour:

- 1 navigates to previous page.

- 2 fits page to screen width.

- 3 navigates to next page.

And also you can use Volume Up/Down hardware keys at the right side of BlackBerry phone:

- Volume Up -> previous page.

- Volume Down -> next page.

If your phone has phisycal keyboard use P key to navigate to previous page and N key for the next page (these keys can be a bit different regarding language settings, see right Action Menu's tooltips).

Use **Go to** dialog in the right Action Menu to navigate to particular page.

Settings

Pull down top screen border to get access to **Settings** page. Let's see what we can find there:

- **Save Last Position** – NSR Reader will save last position (opened document, page number) and restore it on the next launch.

- **Fullscreen Mode** – Action Bar at the bottom of the screen will be hidden (tap on the screen somewhere to show or hide it again).

- **Text Reflow** – this is a special mode for documents, which contain a lot of text information. In this mode NSR Reader will display only text data and wrap lines for comfortable reading.

- **Invert Colors** – use this feature during dark days or if you have OLED display (like **Q10** does) to save power.

- **Text Encoding** – this is only applied for plain text files (.txt). Use it for files with specific national encoding.

Tips & Tricks

- NSR Reader always saves position for every document. **Save Last Position** option in **Settings** only affects loading at the launch.

- Do you see blue bar above the bottom Action Bar? This is a progress reading indicator.

- Just tap on the screen to see current page and overall page count at the top left corner.

- Use **Recent Documents** page to get fast access to documents you have been reading.

- Use pinch gesture for zooming.

- NSR Reader supports password protected documents (except for latest Adobe Reader X encryption algorithm), so don't scary them!

- NSR Reader caches already rendered pages to increase performance.

- You can always open this document from the **About** page (pull down top screen border).

- Do not hesitate to write me for any questions: **Alexander Saprykin <nsr.reader@gmail.com>**
